

Environmental Policy

We care about the environment and are committed to building a healthier Canada and sustainable organization

Our Environmental Commitments

We will effectively manage environmental risks to the business through pro-active assessment, improvement, and the integration of innovations and environmentally preferred practices.

We will minimize environmental impacts of our operations and services focusing first on reducing pollution, waste generation and consumption of resources.

We will ensure that all employees have the knowledge and ability to work in an environmentally responsible manner and in alignment with regulatory requirements.

We strive for continuous improvement by establishing an Environmental Management System, setting objectives and measuring progress annually.

We will share our commitments with all employees, contractors and suppliers, our patients and our communities.

Healthier Environments Everywhere
