| Proteus mirabilis +              | 165                      | 100<br>n:159    | 93         | 96            | 98          | 95            |            | 96         | 100       |                | 92                                |

### **Organism Notes:**

- \* Includes ESBL and AMP-C isolates (4.7% of total Klebsiella pneumoniae isolates identified as ESBL and AMP-C).
- ^ Includes ESBL and AMP-C isolates (4.9% of total E.coli isolates identified as ESBL and AMP-C).
- ^ This isolate is predictably susceptible to Penicillin.
- ^^ Acute and uncomplicated urinary tract infections due to Staphylococcus saprophyticus will respond to commonly used antibiotics including Nitrofurantoin, Trimethoprim-Sulfamethaxazole and Fluoroquinolones.
- ^^^ Clindamycin, Trimethoprim/Sulfamethoxazole and all Cephalosporins are ineffective against Enterococcus species. Enterococcus isolates recovered from urine are generally susceptible to amoxicillin and nitrofurantoin. Susceptibility to Amoxicillin is 98.7% and to Nitrofurantoin is 96.5%
- + Includes ESBL and AMP-C isolates (1.2% of total Proteus mirabilis isolates identified as ESBL and AMP-C).

#### **Antibiotic Notes:**

(1) Cefazolin interpretation predicts results for Cephalexin (Keflex) in accordance with CLSI standards for urinary sites only (not systemic).

# All Other Specimen Types excluding (Urines and Surveillance) - Organisms in Order of Frequency - % Susceptible

## Organism Notes:

^ This isolate is predictably susceptible to Penicillin.

^^ Includes Methicillin Resistant S.aureus (MRSA). MRSA is resistant to all B-Lactams (penicillins, cephalosporins, B-lactam/B-lactamase inhibitor combinations, and carbapenems). MRSA constitutes 12.5% of total Staphylococcus aureus isolates identified.

# **Antibiotic Notes:**

(2) Organisms that are susceptible to Tetracycline are also considered susceptible to Doxycycline.

## **General Notes:**

Antibiogram results, patient risk factors for resistant organisms, and resistance epidemiology should be considered together to help guide empiric treatment of initial infections. Treatment should be re-evaluated as additional information from culture and sensitivity become available.

Calculation of results based on first isolate per patient.

90-100% of isolates are susceptible to the antibiotic indicated (GOOD CHOICE) 21-89% of isolates are susceptible to the antibiotic indicated (INTERMEDIATE CHOICE)

0-20% of isolates are susceptible to the antibiotic indicated (POOR CHOICE)

Value based on < 30 isolates. Statistical comparison on results with less than 30 isolates is unreliable. n = # of isolates tested.

Antibiotic susceptibility testing is not typically performed on the organism.
