Antimicrobial Susceptibility Report January 1, 2022 to December 31, 2022 Erie St. Clair LTC (Excluding Hospitals)

Urinary Tract Pathogens (in Order of Frequency) - % Susceptible

Organism	Number of Isolates	Amox clavulanic	Ampicillin	Cefazolin (1)	Ceftazidime	Ceftriaxone	Ciprofloxacin	Fosfomycin	Gentamicin	Meropenem	Nitrofurantoin	Trimethoprim- Sulfamethoxazole
E. coli ^	557	71	53	77		82	49	97 n:556	95	100	96	80
Enterococcus species ^^^^	155											
Klebsiella pneumoniae *	138	89		92		92	78		96	100	67	91
Proteus mirabilis +	124	95 n:123	81	88		95	65		94	99		82
Pseudomonas aeruginosa	41				100		83		95			
Group B Streptococcus ^^	37											

Organism Notes:

* Includes ESBL and AMP-C isolates (8.0% of total Klebsiella pneumoniae isolates identified as ESBL and AMP-C).

^ Includes ESBL and AMP-C isolates (18.3% of total E.coli isolates identified as ESBL and AMP-C).

M This isolate is predictably susceptible to Penicillin.

Clindamycin, Trimethoprim/Sulfamethoxazole and all Cephalosporins are ineffective against Enterococcus species. Enterococcus isolates recovered from urine are generally susceptible to amoxicillin and nitrofurantoin. Susceptibility to Amoxicillin is 95.7% and to Nitrofurantoin is 94.9%

+ Includes ESBL and AMP-C isolates (4.0% of total Proteus mirabilis isolates identified as ESBL and AMP-C).

Antibiotic Notes:

(1) Cefazolin interpretation predicts results for Cephalexin (Keflex) in accordance with CLSI standards for urinary sites only (not systemic).

All Other Specimen Types excluding (Urines and Surveillance) - Organisms in Order of **Frequency - % Susceptible**

Organism	Number of Isolates	Cefazolin	Ceftazidime	Ciprofloxacin	Clindamycin	Cloxacillin	Erythromycin	Gentamicin	Tetracycline (2)	Trimethoprim- Sulfamethoxazole
Staphylococcus aureus ^^^	324	57 n:279			52 n:279	57 n:279	40 n:279		99 n:277	100 n:279
Pseudomonas aeruginosa	133		96	79				93		
Group B Streptococcus ^^	37									

Organism Notes:

^^ This isolate is predictably susceptible to Penicillin.

MRSA is resistant to all B-Lactams (penicillins, cephalosporins, B-lactam/B-lactamase inhibitor combinations, and carbapenems). MRSA constitutes 41.0% of total Staphylococcus aureus isolates identified.

Antibiotic Notes:

(2) Organisms that are susceptible to Tetracycline are also considered susceptible to Doxycycline.

General Notes:

Antibiogram results, patient risk factors for resistant organisms, and resistance epidemiology should be considered together to help guide empiric treatment of initial infections. Treatment should be re-evaluated as additional information from culture and sensitivity become available.

Calculation of results based on first isolate per patient.
