# Antimicrobial Susceptibility Report January 1, 2022 to December 31, 2022 North Simcoe Muskoka Out Patient (Excluding Hospitals)

# Urinary Tract Pathogens (in Order of Frequency) - % Susceptible

Organism	Number of Isolates	Amox clavulanic	Ampicillin	Cefazolin (1)	Ceftriaxone	Ciprofloxacin	Fosfomycin	Gentamicin	Meropenem	Nitrofurantoin	Trimethoprim- Sulfamethoxazole
E. coli ^	6055	86	68	90	94	78	98	95	100	98	85
Enterococcus species ^^^^	1621										
Klebsiella pneumoniae *	1003	95		94	98	92		99	100	30	94
Group B Streptococcus ^^	709										
Proteus mirabilis +	254	<b>98</b> n:251	90	95	99	94		97	100		91
Staphylococcus saprophyticus ^^^	204										

#### **Organism Notes:**

\* Includes ESBL and AMP-C isolates (2.5% of total Klebsiella pneumoniae isolates identified as ESBL and AMP-C).

^ Includes ESBL and AMP-C isolates ( 5.9% of total E.coli isolates identified as ESBL and AMP-C ).

M This isolate is predictably susceptible to Penicillin.

Acute and uncomplicated urinary tract infections due to Staphylococcus saprophyticus will respond to commonly used antibiotics including Nitrofurantoin, Trimethoprim-Sulfamethaxazole and Fluoroquinolones.

Clindamycin, Trimethoprim/Sulfamethoxazole and all Cephalosporins are ineffective against Enterococcus species. Enterococcus isolates recovered from urine are generally susceptible to amoxicillin and nitrofurantoin. Susceptibility to Amoxicillin is 95.7% and to Nitrofurantoin is 94.9%

+ Includes ESBL and AMP-C isolates (0.4% of total Proteus mirabilis isolates identified as ESBL and AMP-C).

### Antibiotic Notes:

(1) Cefazolin interpretation predicts results for Cephalexin (Keflex) in accordance with CLSI standards for urinary sites only (not systemic).

## All Other Specimen Types excluding (Urines and Surveillance) - Organisms in Order of Frequency - % Susceptible

Organism	Number of Isolates	Cefazolin	Ceftazidime	Ciprofloxacin	Clindamycin	Cloxacillin	Erythromycin	Gentamicin	Tetracycline (2)	Trimethoprim- Sulfamethoxazole
Staphylococcus aureus ^^^	797	<mark>85</mark> n:734			77 n:734	<mark>85</mark> n:734	<b>67</b> n:734		<b>96</b> n:733	<b>100</b> n:731
Pseudomonas aeruginosa	246		96	85				98		
Group A Streptococcus ^^	174								_	
Group B Streptococcus ^^	64									

### Organism Notes:

<sup>^</sup> This isolate is predictably susceptible to Penicillin.

^ Includes Methicillin Resistant S.aureus (MRSA). MRSA is resistant to all B-Lactams (penicillins, cephalosporins, B-lactam/B-lactamase inhibitor combinations, and carbapenems). MRSA constitutes 14.1% of total Staphylococcus aureus isolates identified.

#### Antibiotic Notes:

(2) Organisms that are susceptible to Tetracycline are also considered susceptible to Doxycycline.

#### **General Notes:**

Antibiogram results, patient risk factors for resistant organisms, and resistance epidemiology should be considered together to help guide empiric treatment of initial infections. Treatment should be re-evaluated as additional information from culture and sensitivity become available.

Calculation of results based on first isolate per patient.
