Antimicrobial Susceptibility Report January 1, 2022 to December 31, 2022 North West Out Patient (Excluding Hospitals)

Urinary Tract Pathogens (in Order of Frequency) - % Susceptible

Organism	Number of Isolates	Amox clavulanic	Ampicillin	Cefazolin (1)	Ceftriaxone	Ciprofloxacin	Fosfomycin	Gentamicin	Meropenem	Nitrofurantoin	Trimethoprim- Sulfamethoxazole
E. coli ^	2569	85	64	89	93	77	99	94	100	98	83
Enterococcus species ^^^^	562										
Group B Streptococcus ^^	473										
Klebsiella pneumoniae *	403	92		94	96	88		99	100	34	93
Proteus mirabilis +	120	99	87	94	100	96		95	100		88
Staphylococcus saprophyticus ^^^	99										

Organism Notes:

* Includes ESBL and AMP-C isolates (4.2% of total Klebsiella pneumoniae isolates identified as ESBL and AMP-C).

^ Includes ESBL and AMP-C isolates (7.1% of total E.coli isolates identified as ESBL and AMP-C).

M This isolate is predictably susceptible to Penicillin.

Acute and uncomplicated urinary tract infections due to Staphylococcus saprophyticus will respond to commonly used antibiotics including Nitrofurantoin, Trimethoprim-Sulfamethaxazole and Fluoroquinolones.

Clindamycin, Trimethoprim/Sulfamethoxazole and all Cephalosporins are ineffective against Enterococcus species. Enterococcus isolates recovered from urine are generally susceptible to amoxicillin and nitrofurantoin. Susceptibility to Amoxicillin is 95.7% and to Nitrofurantoin is 94.9%

+ Includes ESBL and AMP-C isolates (0.0% of total Proteus mirabilis isolates identified as ESBL and AMP-C).

Antibiotic Notes:

(1) Cefazolin interpretation predicts results for Cephalexin (Keflex) in accordance with CLSI standards for urinary sites only (not systemic).

All Other Specimen Types excluding (Urines and Surveillance) - Organisms in Order of Frequency - % Susceptible

Organism	Number of Isolates	Cefazolin	Ceftazidime	Ciprofloxacin	Clindamycin	Cloxacillin	Erythromycin	Gentamicin	Tetracycline (2)	Trimethoprim- Sulfamethoxazole
Staphylococcus aureus ^^^	463	78 n:431			<mark>82</mark> n:431	78 n:431	67 n:430		99 n:430	99 n:424
Group A Streptococcus ^^	169									
Pseudomonas aeruginosa	87		89	83				98		
Group B Streptococcus ^^	55									

Organism Notes:

[^] This isolate is predictably susceptible to Penicillin.

^ Includes Methicillin Resistant S.aureus (MRSA). MRSA is resistant to all B-Lactams (penicillins, cephalosporins, B-lactam/B-lactamase inhibitor combinations, and carbapenems). MRSA constitutes 21.8% of total Staphylococcus aureus isolates identified.

Antibiotic Notes:

(2) Organisms that are susceptible to Tetracycline are also considered susceptible to Doxycycline.

General Notes:

Antibiogram results, patient risk factors for resistant organisms, and resistance epidemiology should be considered together to help guide empiric treatment of initial infections. Treatment should be re-evaluated as additional information from culture and sensitivity become available.

Calculation of results based on first isolate per patient.
