

Klinrisk Kidney Test – Enabling early detection of high risk kidney disease

One in three Canadians are at risk for chronic kidney disease (CKD)¹. If caught early and managed, CKD is treatable and progression is preventable.

Blood and urine testing is the only way to know
how well your kidneys are working

Klinrisk* – a next generation solution to assess CKD risk

Klinrisk is a powerful artificial intelligence algorithm-based tool that provides prognostic information beyond common kidney function tests and identifies patients who are at risk of kidney disease progression and developing CKD. Klinrisk is built for all patients with kidney disease and helps with early identification of patients that are at risk of progressive kidney disease. By using routine laboratory test results, the algorithm calculates a risk score so that these patients can reduce their chances of developing end-stage kidney disease.^{2,3}

***Please note:** Klinrisk is only available in Ontario and British Columbia through LifeLabs

Common causes of kidney disease include
diabetes and hypertension
