

Urinary Tract Pathogens (in Order of Frequency) - % Susceptible

Organism	Number of Isolates	Amox clavulanic	Ampicillin	Cefazolin (1)	Ceftriaxone	Ciprofloxacin	Fosfomycin	Gentamicin	Meropenem	Nitrofurantoin	Trimethoprim- Sulfamethoxazole
E. coli ^	15415	82	60	86	90	72	98	93	100	98	81
Enterococcus species ^^^	4479										
Group B Streptococcus ^^	2861										
Klebsiella pneumoniae *	2710	93		93	95	88		99	100	32	94
Proteus mirabilis +	990	98 n:989	86 n:989	94 n:989	98 n:989	91 n:989		95 n:989	100 n:989	n:989	88 n:989
Staphylococcus saprophyticus ^^^	400										

Organism Notes:

- * Includes ESBL and AMP-C isolates (4.6% of total Klebsiella pneumoniae isolates identified as ESBL and AMP-C).
- ^ Includes ESBL and AMP-C isolates (9.7% of total E.coli isolates identified as ESBL and AMP-C).
- ^ This isolate is predictably susceptible to Penicillin.
- ^^ Acute and uncomplicated urinary tract infections due to Staphylococcus saprophyticus will respond to commonly used antibiotics including Nitrofurantoin, Trimethoprim-Sulfamethaxazole and Fluoroquinolones.
- ^^^ Clindamycin, Trimethoprim/Sulfamethoxazole and all Cephalosporins are ineffective against Enterococcus species. Enterococcus isolates recovered from urine are generally susceptible to amoxicillin and nitrofurantoin. Susceptibility to Amoxicillin is 97.0% and to Nitrofurantoin is 95.2%
- + Includes ESBL and AMP-C isolates (0.7% of total Proteus mirabilis isolates identified as ESBL and AMP-C).

Antibiotic Notes:

(1) Cefazolin interpretation predicts results for Cephalexin (Keflex) in accordance with CLSI standards for urinary sites only (not systemic).

All Other Specimen Types excluding (Urines and Surveillance) - Organisms in Order of Frequency - % Susceptible

Organism	Number of Isolates	Cefazolin	Ceftazidime	Ciprofloxacin	Clindamycin	Cloxacillin	Erythromycin	Tetracycline (2)	Trimethoprim- Sulfamethoxazole
Group A Streptococcus ^^	4474								
Staphylococcus aureus ^^^	1810	87			80	87	69	96	100
Pseudomonas aeruginosa	538		96 n:537	87 n:537					
Group B Streptococcus ^^	213								

Organism Notes:

^ This isolate is predictably susceptible to Penicillin.

^^ Includes Methicillin Resistant S.aureus (MRSA). MRSA is resistant to all B-Lactams (penicillins, cephalosporins, B-lactam/B-lactamase inhibitor combinations, and carbapenems). MRSA constitutes 12.7% of total Staphylococcus aureus isolates identified.

Antibiotic Notes:

(2) Organisms that are susceptible to Tetracycline are also considered susceptible to Doxycycline.

General Notes:

Antibiogram results, patient risk factors for resistant organisms, and resistance epidemiology should be considered together to help guide empiric treatment of initial infections. Treatment should be re-evaluated as additional information from culture and sensitivity become available.

Calculation of results based on first isolate per patient.

90-100% of isolates are susceptible to the antibiotic indicated (GOOD CHOICE)

21-89% of isolates are susceptible to the antibiotic indicated (INTERMEDIATE CHOICE)

0-20% of isolates are susceptible to the antibiotic indicated (POOR CHOICE)

Value based on < 30 isolates. Statistical comparison on results with less than 30 isolates is unreliable. n = # of isolates tested.

Antibiotic susceptibility testing is not typically performed on the organism.
