

# **Urinary Tract Pathogens (in Order of Frequency) - % Susceptible**

Organism	Number of Isolates	Amox clavulanic	Ampicillin	Cefazolin (1)	Ceftazidime	Ceftriaxone	Ciprofloxacin	Fosfomycin	Gentamicin	Meropenem	Nitrofurantoin	Trimethoprim- Sulfamethoxazole
E. coli ^	1343	71	48	77		82	57	96	90	100	95	74
Enterococcus species ^^^	372											
Klebsiella pneumoniae *	349	87		89		91	85		95	100	58	89
Proteus mirabilis +	311	97 n:310	81	88		95	77		97	98		88
Pseudomonas aeruginosa	149				98 n:148		80 n:148					
Group B Streptococcus ^^	99											

#### **Organism Notes:**

- \* Includes ESBL and AMP-C isolates (9.2% of total Klebsiella pneumoniae isolates identified as ESBL and AMP-C).
- ^ Includes ESBL and AMP-C isolates (17.8% of total E.coli isolates identified as ESBL and AMP-C).

^^^ Clindamycin, Trimethoprim/Sulfamethoxazole and all Cephalosporins are ineffective against Enterococcus species. Enterococcus isolates recovered from urine are generally susceptible to amoxicillin and nitrofurantoin. Susceptibility to Amoxicillin is 97.0% and to Nitrofurantoin is 95.2%

+ Includes ESBL and AMP-C isolates (3.5% of total Proteus mirabilis isolates identified as ESBL and AMP-C).

#### **Antibiotic Notes:**

(1) Cefazolin interpretation predicts results for Cephalexin (Keflex) in accordance with CLSI standards for urinary sites only (not systemic).

# All Other Specimen Types excluding (Urines and Surveillance) - Organisms in Order of Frequency - % Susceptible

Organism	Number of Isolates	Cefazolin	Ceftazidime	Ciprofloxacin	Clindamycin	Cloxacillin	Erythromycin	Tetracycline (2)	Trimethoprim- Sulfamethoxazole
Staphylococcus aureus ^^^	484	<b>70</b> n:454			60 n:454	<b>70</b> n:454	<b>53</b> n:454	<b>97</b> n:454	98 n:454
Pseudomonas aeruginosa	235		94	82					
Group B Streptococcus ^^	40								

### **Organism Notes:**

^^ This isolate is predictably susceptible to Penicillin.

^ Includes Methicillin Resistant S.aureus (MRSA). MRSA is resistant to all B-Lactams (penicillins, cephalosporins, B-lactam/B-lactamase inhibitor combinations, and carbapenems). MRSA constitutes 30.0% of total Staphylococcus aureus isolates identified.

### **Antibiotic Notes:**

(2) Organisms that are susceptible to Tetracycline are also considered susceptible to Doxycycline.

## **General Notes:**

Antibiogram results, patient risk factors for resistant organisms, and resistance epidemiology should be considered together to help guide empiric treatment of initial infections. Treatment should be re-evaluated as additional information from culture and sensitivity become available.

Calculation of results based on first isolate per patient.

90-100% of isolates are susceptible to the antibiotic indicated (GOOD CHOICE)

21-89% of isolates are susceptible to the antibiotic indicated (INTERMEDIATE CHOICE)

0-20% of isolates are susceptible to the antibiotic indicated (POOR CHOICE)

Value based on < 30 isolates. Statistical comparison on results with less than 30 isolates is unreliable. n = # of isolates tested.

Antibiotic susceptibility testing is not typically performed on the organism.

<sup>^</sup> This isolate is predictably susceptible to Penicillin.
