

# List of medications that will affect Hormone Health Stress and Sleep testing

## Medications Affecting Salivary Cortisol, DHEAS, and Melatonin

Medication	Specific Examples	Effect on Cortisol	Effect on DHEAS	Effect on Melatonin	Notes
<b>Glucocorticoids Steroid medications</b>	<ul style="list-style-type: none"> <li>Prednisone,</li> <li>Hydrocortisone (Topical or Tablets)</li> <li>Cortef</li> <li>Prednisolone</li> <li>Dexamethasone,</li> <li>Asthma medication</li> </ul>	Increases or mimics	Decreases	No significant effect	Directly impacts cortisol levels; suppresses adrenal androgen production.
<b>Oral Contraceptive Progesterone Estrogens</b>	<ul style="list-style-type: none"> <li>Birth control pills</li> <li>HRT</li> </ul>	Increases	Decreases	No significant effect	Raises cortisol-binding globulin; speeds DHEAS metabolism.
<b>Beta-Blockers</b>	<ul style="list-style-type: none"> <li>Propranolol</li> <li>Atenolol</li> </ul>	Decreases	No significant effect	Decreases	Reduces stress response (cortisol) and blunts nocturnal melatonin levels.
<b>Stimulants ADHD medications</b>	<ul style="list-style-type: none"> <li>Amphetamines (Adderall, Ritalin, Vyvanse)</li> </ul>	Increases	No significant effect	No significant effect	Triggers stress response, increasing cortisol.
<b>Opioids</b>	<ul style="list-style-type: none"> <li>Morphine</li> <li>Oxycodone</li> <li>Hydrocodone</li> </ul>	Decreases	No significant effect	No significant effect	Suppresses HPA axis, reducing cortisol.
<b>Androgen Therapy</b>	<ul style="list-style-type: none"> <li>DHEA supplements</li> <li>Testosterone</li> </ul>	No significant effect	Increases	No significant effect	Directly elevates DHEAS levels.
<b>Antidepressants</b>	<ul style="list-style-type: none"> <li>SSRIs (Sertraline, Fluoxetine)</li> </ul>	Variable (often decreases)	Variable (often decreases)	Variable (often decreases)	Alters HPA axis and serotonin pathways.
<b>Antifungal Medications</b>	<ul style="list-style-type: none"> <li>Ketoconazole</li> </ul>	Decreases	Decreases	No significant effect	Alters HPA axis and serotonin pathways.
<b>Benzodiazepines</b>	<ul style="list-style-type: none"> <li>Lorazepam</li> <li>Diazepam</li> </ul>	No significant effect	No significant effect	Decreases	Sedative effects blunt melatonin secretion.
<b>Herbal Supplements</b>	<ul style="list-style-type: none"> <li>Licorice root</li> </ul>	Variable	No significant effect	No significant effect	May mimic or inhibit cortisol breakdown depending on form.
<b>Herbal Supplements</b>	<ul style="list-style-type: none"> <li>St. John's Wort</li> </ul>	No significant effect	No significant effect	Variable	May influence melatonin through serotonin metabolism.
<b>Adrenal Supplements</b>	<ul style="list-style-type: none"> <li>Glandular adrenal</li> </ul>	Increases	Increases	Variable
