

# **Urinary Tract Pathogens (in Order of Frequency) - % Susceptible**

Organism	Number of Isolates	Amox clavulanic	Ampicillin	Cefazolin (1)	Ceftriaxone	Ciprofloxacin	Fosfomycin	Gentamicin	Meropenem	Nitrofurantoin	Trimethoprim- Sulfamethoxazole
E. coli ^	5078	87	62	91	94	77	98	93	100	97	82
Enterococcus species ^^^	1367										
Klebsiella pneumoniae *	1074	92		91	93	87		98	100	40	90
Group B Streptococcus ^^	518										
Proteus mirabilis +	234	97 n:233	82 n:233	<b>92</b> n:233	98 n:233	89 n:233		94 n:233	100 n:233		86 n:233
Staphylococcus saprophyticus ^^^	159										

### **Organism Notes:**

- \* Includes ESBL and AMP-C isolates (6.8% of total Klebsiella pneumoniae isolates identified as ESBL and AMP-C).
- ^ Includes ESBL and AMP-C isolates (5.6% of total E.coli isolates identified as ESBL and AMP-C).
- M This isolate is predictably susceptible to Penicillin.
- ^^ Acute and uncomplicated urinary tract infections due to Staphylococcus saprophyticus will respond to commonly used antibiotics including Nitrofurantoin, Trimethoprim-Sulfamethaxazole and Fluoroquinolones.
- ^^^ Clindamycin, Trimethoprim/Sulfamethoxazole and all Cephalosporins are ineffective against Enterococcus species. Enterococcus isolates recovered from urine are generally susceptible to amoxicillin and nitrofurantoin. Susceptibility to Amoxicillin is 97.9% and to Nitrofurantoin is 96.5%
- + Includes ESBL and AMP-C isolates (1.7% of total Proteus mirabilis isolates identified as ESBL and AMP-C).

#### **Antibiotic Notes:**

(1) Cefazolin interpretation predicts results for Cephalexin (Keflex) in accordance with CLSI standards for urinary sites only (not systemic).

# All Other Specimen Types excluding (Urines and Surveillance) - Organisms in Order of Frequency - % Susceptible

Organism	Number of Isolates	Cefazolin	Ceftazidime	Ciprofloxacin	Clindamycin	Cloxacillin	Erythromycin	Tetracycline (2)	Trimethoprim- Sulfamethoxazole
Group A Streptococcus ^^	1246								
Staphylococcus aureus ^^^	1133	81			82	81	70	98	100
Pseudomonas aeruginosa	237		99 n:236	87 n:236					
Group B Streptococcus ^^	115								

## Organism Notes:

^ This isolate is predictably susceptible to Penicillin.

^^ Includes Methicillin Resistant S.aureus (MRSA). MRSA is resistant to all B-Lactams (penicillins, cephalosporins, B-lactam/B-lactamase inhibitor combinations, and carbapenems). MRSA constitutes 18.2% of total Staphylococcus aureus isolates identified.

# **Antibiotic Notes:**

(2) Organisms that are susceptible to Tetracycline are also considered susceptible to Doxycycline.

## **General Notes:**

Antibiogram results, patient risk factors for resistant organisms, and resistance epidemiology should be considered together to help guide empiric treatment of initial infections. Treatment should be re-evaluated as additional information from culture and sensitivity become available.

Calculation of results based on first isolate per patient.

90-100% of isolates are susceptible to the antibiotic indicated (GOOD CHOICE)

21-89% of isolates are susceptible to the antibiotic indicated (INTERMEDIATE CHOICE) 0-20% of isolates are susceptible to the antibiotic indicated (POOR CHOICE)

Value based on < 30 isolates. Statistical comparison on results with less than 30 isolates is unreliable. n = # of isolates tested.

Antibiotic susceptibility testing is not typically performed on the organism.
