

LifeLabs Service Update

RESUMPTION OF 24-HOUR URINE OXALATE TESTING IN ONTARIO

Dear Health Care Providers,

We're pleased to share that LifeLabs has received a new shipment of the urine oxalate reagent and will be resuming 24-Hour Urine Oxalate Testing service in Ontario **February 9th, 2026**.

Urine oxalate testing is indicated for risk stratification for kidney stone formation, to monitor therapy for kidney stones, and to diagnose primary or secondary hyperoxaluria.

This test was previously suspended on a temporary basis due to a global supply shortage for the reagent used for oxalate measurement.

We look forward to supporting you and your patients by resuming this testing service.

If you have any questions, please contact LifeLabs Customer Support Centre at 1-877-849-3637.

Thank you.
